

# The Textile Process

Providing a Secure & Sustainable Alternative  
to Landfill for your Textiles

## Sustainability

- Zero to landfill
- 13.5kg of CO2 saved for every 1kg of textiles recycled by the Avena process
- Every 1Kg of textiles that goes through the Avena process saves 1000 litres of water
- Helps towards ISO 14001 achievement & retention

## Security

- Garments destroyed to an unrecognisable state
- Certificate of destruction issued after every collection
- All Staff are BS 7858 vetted
- Compliant with BS EN 15713-2009 code of practice
- Accredited with ISO 9001

## How it works

1. Place your end of life textile materials in the unit supplied.
2. Avena collects on a scheduled collection basis.
3. Avena will securely destroy the material for brand protection and to aid the recycling processes.
4. Fibres are then recycled depending on composition. We recycle as much as possible in to alternative materials for things such as soundboards, insulation and geo-textiles.
5. Any textiles that cannot be recycled in to other products are converted in to pellets for refuse derived fuel.
6. We achieve Zero to Landfill
