

SC0038

Double Weight, Bonded Chemical Roll 38cm x 40m (Pack of 2)

38cm x 40m • 45L Capacity • 2 rolls per pack

PRODUCT DESCRIPTION

High-performance absorbent rolls for acids, alkalis and other aggressive chemicals. Made from chemically inert polypropylene, their double-weight, bonded construction retains strength when saturated and helps minimise fibre shedding. Perforated across the width and along the length for easy sizing and reduced waste. Ideal for fast spill response in workshops, production areas, maintenance facilities and chemical storage or transport sites.

FEATURES & BENEFITS

- High absorption capacity of 45 litres
- Supplied 2 rolls per pack
- Generous 38 cm x 40 m roll format
- Made from polypropylene material
- Suitable for acids, alkalis and strong chemical liquids
- Polypropylene absorbent material with strong wicking action
- Roll format can be cut or torn to suit the area being treated
- Useful for larger surfaces, workbenches and recurring maintenance tasks

HOW TO USE

Unroll and place directly onto the spilt liquid. The material absorbs and holds the fluid cleanly and efficiently. Dispose of saturated material in line with local regulations and the hazards of the chemical absorbed. The absorbent roll can also be used by placing it in the base of a tray to absorb any expected spills.
